

Voltatex[®] 7145 A

Thermal class 220 (H) with
PAI - Topcoat

Chemical base

Voltatex[®] 7145 A is based on a THEIC- modified polyester resin.

Specific characteristics and particular benefits

Magnet wires insulated with Voltatex[®] 7145 A and a PAI as Topcoat combine a high degree of thermal rating with excellent mechanical properties. Additional typical properties are good chemical resistance and a high level of flexibility.

In order to achieve increased resistance to chemicals, an application combined with polyamideimide based topcoat (e.g. Voltatex[®] 81.., Voltatex[®] 82.., Voltatex[®] 83.. or Voltatex[®] 85..) is possible.

Combined with other Voltatex[®] wire enamel products Voltatex[®] 7145 A is usable for wires acc. IEC 60317-13 and ANSI/NEMA MW 35-C, MW 73-C and MW 76-A-C.

Listed test results based on Axalta Coating Systems standards, following IEC standards 60851.

UL (Underwrites Laboratories)

Voltatex[®] 71..A with Voltatex[®] 8227 as a group of coat type followed by a numerical suffix to denote solid content is approved and listed in Underwrites Laboratories File E102069.

Fields of application

Voltatex[®] 7145 A is widely used on magnet wires for electrical motors, pump motors, refrigeration equipment, transformers, ballasts for fluorescent lamps and applications with special mechanical and chemical loads.

Processing

Voltatex[®] 7145 A can be applied in a wire diameter range from approx. 0.30 mm up to approx. 5.00 mm, single and heavy build by convection or recirculating air ovens, both horizontal and vertical types. Voltatex[®] 7145 A is formulated for dies application.

Health and Safety in processing and storage

We refer to the Material Safety Data Sheet (MSDS).

Solid content (1g, 1h, 180 °C)

44 – 46 %

Viscosity DIN 53015 (23°C / 73.4 °F)

Information on use of IBC containers for supply of Axalta wire enamels

Composite IBCs consist of a plastic bottle surrounded by a metal housing or metal frame.

In these cases, Axalta Coating System is providing composite IBCs, which represent an approved industry standard solution, meet local regulations for shipping and comply with applicable requirements for electrostatic control for classified areas. However, in case of a fire incident, plastic bottles might melt, release flammable liquids and thus contribute to spreading the fire. Axalta Coating Systems will not accept any liability for damages of any nature whatsoever resulting from the impact of a fire incident on this kind of packaging.
